Business Development Manager - Renewables

ASSET MONITORING SOLUTIONS

PHASE 1

Proof of concept through
real-time mooring load insights

PHASE 2

Data insights to support
upscaling and risk management

PHASE 3

Continuous improvement
in design and efficiency

ENABLING DIGITALISATION FOR THE FUTURE

Pilot projects: Hywind

ASSET ASSURANCE & LEARNING

Supplied to MacGregor Pusnes

- Patented strain ring sensors integrate seamlessly into pre-existing configurations
- Proven to support floating assets in challenging offshore O&G environments
- Delivers accurate mooring load data in real time
- Data insights prove that models work in practice
- Resolution of 0.25% of full scale

Phase

1

PILOT PROJECT SUPPORT

+

Model verification

Value engineering

+

Material reduction

+

Accelerating R&D

+

Adding value and reducing risk

Phase

2

DATA FOR UPSCALING

- + Integral to achieving sustainability
- + Risk management for large commercial arrays
- + Security and reliability
- + Contributing to LCOE
- + Adding value and reducing risk

Phase

3

DIGITALISATION

- + Data analytics for predictive maintenance, enabling asset life extension opportunities
- + Improves asset cost-efficiency
- + Enables the remote management of platforms and partners
- + Drives continuous improvement initiatives

STRAIN RINGS IN ACTION

CONCLUSION

+ Proven in O&G, our technology has been deployed in a number of the world's leading floating offshore wind projects

+ Our asset monitoring solutions support the sustainable upscaling of arrays as the industry develops

+ This technology can also help to unlock the safety and cost-efficiency benefits of digitalisation

Projects that we've supported:

Hywind Scotland

Kincardine (KOWL)

Saitec Floating Wind

TetraSpar

SE Strainstall
